## **Report Help**

### **Ten steps to understanding your BuildFax Structure PROFILE**

- 1. Verify the Address:** Verify that the address printed above is correct, and if a map appears above the address, whether the map depicts the location of the address. This Structure PROFILE report is specifically for the address listed above.
- 2. Understand Coverage:** BuildFax collects data from building departments through the United States and searches for your address, city, state, and zip within the data BuildFax collects. BuildFax considers the above address to be in coverage because either BuildFax has data from the specific municipality that the address is in, or BuildFax has data for the city, state, and zip code that the address is in and there is no separate city building department (meaning that the above address is permitted by either a county or a neighboring city). BuildFax provides a Structure PROFILE report for every address within coverage, regardless of whether BuildFax has individual building permits on the address, because knowing the age of major systems, lack of value increases, and absence of risk factors over time is critically valuable information on the address.
- 3. Note the Date Ranges:** The "summary" tab lists two date ranges - one for the building department ("jurisdiction") and one for the above address. The jurisdiction range covers the dates for which the full BuildFax database has data. This means that any permitted work within that date range on the above address will be listed in this Structure PROFILE. The address range covers the dates for which this Structure PROFILE has permits on the above address.
- 4. Know the Jurisdiction(s):** The jurisdiction (also known as the building department, community development department, and/or permitting authority) listed on the "summary" tab is the source for the data within the Structure PROFILE. In the case where multiple jurisdictions have permits on the above address, you will see multiple jurisdictions as choices on tabs directly below the address above. BuildFax provides contact information for jurisdictions (including web sites where available) so that you can contact jurisdictions directly for further information.
- 5. Examine Major Systems:** BuildFax organizes its knowledge of the jurisdiction's data and the specific address's data into several different views, one of which is an analysis of "major systems". BuildFax has identified a number of "major systems" for which (1) permits are overwhelmingly required, (2) jurisdictions store consistent information about the permits, and (3) if work is not permitted through the jurisdiction, it is a cause for concern. BuildFax is not perfect at its "major systems" analysis, but in recently-conducted controlled tests, the BuildFax analysis was correct more than 95% of the time. Because of the possibility of miscategorization or error, BuildFax encourages customers to contact the dedicated professionals at the relevant jurisdiction if something seems incorrect.
- 6. Break Down Value Changes:** Another view that BuildFax provides into permit data is an analysis by permit valuation. Permit valuation is usually not the amount of money spent by the owner of the structure for the improvement or repair; rather, permit valuation is usually an estimate of construction cost, and, because it is usually used to estimate permit fees, the permit valuation is often lower than a market value estimate of the construction cost. In addition, many permits will have a \$0.00 valuation because the jurisdiction used some method other than valuation to determine fees, and so the jurisdiction did not log the actual valuation estimate for the permit in question. (This is very common with electrical, plumbing, and mechanical permits).
- 7. Evaluate Risk and Mitigation:** BuildFax also provides an analysis of particular risk and risk-mitigating keywords within permit data to flag permits that may be of interest to BuildFax customers. BuildFax analysts have combed through more than 80 million permits with a state-of-the-art text mining engine to come up with the particular risk keyword categories provided on the "risk" tab. Like the "major systems" analysis, the "risk" analysis is imperfect, although usually accurate.
- 8. Take Note of the Contractors:** The "contractors" tab lists all of the contractors who have done work on the above address in the jurisdiction's database, along with details about the contractor's activity in the local jurisdiction. For example, you can see how many permits the contractor has pulled in the jurisdiction over a particular date range.
- 9. Review the Permit Details:** The "permits" tab lists all of the permits that make up the rest of the Structure PROFILE report. After reviewing major systems, value changes, risk, and contractors, the "permits" tab shows you the full details of all permits over time for the above address.
- 10. Follow Up:** The jurisdiction listed on the "summary" tab and the contractors listed on the "contractors" tab are great resources in understanding the permits that have been issued on the above address. If you have questions about particular key words in permit details, or about permitted work in general, BuildFax strongly recommends that you contact the jurisdiction and/or the relevant licensed contractors to find out more.
